

About Us

PASS are a fully accredited, full service organisation who are recognised as specialists in the training and development of electrical skills such as PAT testing. We can offer a huge range of **electrical training** courses along with many **City & Guilds** qualifications, which are all officially recognised and in line with all IEE codes of practice.

Our **electrical training** courses range from basic to advanced, offering a route into the electrical industry or a refresher on your existing skills. Our **City & Guilds electrician courses** will provide you with an industry-recognised qualification, ideal if you're just starting out. In addition to our **electrical training** courses, we deliver **plumbing courses** – perfect if you're looking for a career change. Our plumbing courses and **electrical courses** are accompanied by the delivery of EAL **Part P** qualification, a vital part of modern domestic installation work.

With PASS, your training will be delivered to the highest standard. We are highly-skilled with years of experience behind us, and know exactly what it takes to deliver top quality, professional qualifications. We have helped hundreds of people looking for a career change to become officially-recognised PAT testers to a professional industry standard, and our **electrical training** service will ensure you receive only the best in **electrician training**.

Training with PASS is an ideal way to develop a career within the electrical industry. Our friendly trainers will deliver our **electrical training** courses in an approachable, enjoyable manner. All our trainers are fully qualified and individually accredited themselves, so you can be certain of an enjoyable yet effective training programme.

Unlike other organisations, our training courses are limited to a maximum of eight people so that the level of training you receive for your money is exactly what you would expect. In addition, we guarantee that there will always be one trainer for every two delegates, providing total hands-on experience to give you quality **electrical training**. And to ensure complete value for money, you can take the final test as many times as you need to without any extra charge – we guarantee you a pass!

We have eight **electrical training** centres, located nationwide from Glasgow to London. All of our electrical training centres are purpose-built to allow the best possible training experience. Our centres are all equipped with the necessary equipment you will need to gain a qualification in electrical testing. Naturally you will have full access to this equipment inclusive of the cost of the training course.

Even if you don't have the time to travel to a training course with us, we can still deliver our excellent electrical training by coming to you, to give the best in **electrician training** to anyone, anywhere.

The current economic climate has left millions facing doubt and uncertainty. For many, guaranteed regular income has become a thing of the past, replaced by constant financial worry as well as the feeling of helplessness that accompanies a job loss. And it can seem that however hard you try, you just can't get past the interview stage – if you're lucky enough to be invited to interview at all.

But recent studies have indicated that, whilst some sectors such as PR, Marketing and Retail have seen a decline in job numbers, others have actually seen a rise. One of those areas is the electrical industry, an area which has had a skills shortage for a number of years, long before the credit crunch. So could **changing career** to become an electrician provide you with much-needed financial stability?

You may worry that **electrical training** or a **career change** could be a risk not worth taking. But if you consider the fact that electricians are in short supply nationwide, a **career change** into the electrical trade would seem tempting.

Aside from being in short supply, there simply aren't enough people undergoing **electrical training** in order to replace those retiring from industry. The gap between electrician vacancies and workers is actually growing, making **electrician training** a smart route to follow. The potential to develop a steady financial income with a loyal customer base is good business in any industry, and this is exactly what you can get following **electrician training**.

Being able to provide an electrician service is an excellent way to ensure you have a steady stream of work, and income. At any given time, someone will require electrical work to be carried out, be it an individual carrying out some DIY or a construction company offering a large contract to work on a number of developments.

Electrician training and **City and Guilds** qualifications will increase your chances of finding work, especially if you combine it with any existing skills you have, such as other trades or a business brain to set up your own business, meaning you can use your **electrician training** without waiting to be interviewed.

If you were to complete just four **City and Guilds** qualifications; **City & Guilds** 2330 Level 2 and 3 (which would allow you to practice whilst continuing your electrical training) followed by **City & Guilds** 2382 (17th Edition) and **City & Guilds** 2391, you would then be a fully-qualified, accredited electrician.

In addition to these electrical courses, we can also offer the following brand new courses:

- **City and Guilds** – 2382-10 Level 3
17th Edition Wiring Regulations, Full Course (4 days)
- **City and Guilds** – 2382-20 Level 3
17th Edition Wiring Update (2 days)
- **City and Guilds** – 2391-10 Level 3
Certification In Inspection, Testing & Certification of Electrical Installations.

- **City and Guilds** - 2392-10 Level 2
Certification in Fundamental Inspection, Testing and Initial Verification.
- **City and Guilds** - 2377-10
The Management of In-service Inspection and Testing of Electrical Equipment (PAT Testing).
- **City and Guilds** - 2377-20
The In-service Inspection and Testing of Electrical Equipment (PAT Testing).
- EAL **Part P** - Full Scope - VRQ Level 2
Certificate for Domestic Electrical Installer.
- Electricity at Work Regulations 1989

Electrician training is now becoming a fundamental aspect of other trades: current regulations state that anyone wishing to certify their own domestic electrical work must be qualified in EAL **Part P**. So, for example, if you're a plumber and wish to carry out even small electrical projects as part of your work, you must have received **electrical training** in this area. Luckily, we can offer you **Part P** training, and even **City and Guilds plumbing courses** in addition to **electrical training**.

Aside from delivering **City and Guilds electrical courses** to those looking for a career change or developing new skills through **electrician training**, we can deliver training on behalf of businesses looking to develop their employees' **electrical training**. If your company requires electrical knowledge, this is an excellent way keeping employee numbers down whilst creating multi-skilled employees: a valuable commodity in today's job market.

So if you are interested in a **career change** into the electrical industry, where the gulf between jobs and workers is conducive to an easier passage into the labour market, **electrical training** is the best way to start.

Alternatively, if you would like to build on your **electrical training** to increase the demand for your electrical services, or even if you would like to boost staff morale as a business owner by offering your employees **electrician training** courses to avoid excessive recruitment, we can guide you through all of the relevant **electrician training** courses you need to get where you're going.
